Title: Capability List
Revision: 1
Date: 10/23/2026

Objective:

To define and maintain Evans Composites, Inc.'s Capability List in accordance with the RSQCM, including the method used to identify components by part number, verify authorization under ECi's repair station ratings and limitations, and document capability through the required self-evaluation process.

Scope:

This Capability List applies only to components for which ECi has completed and documented the required self-evaluation and determined that ECi has the housing, facilities, equipment, materials, technical data, trained personnel, and quality system controls necessary to perform the authorized maintenance functions.

Authorized functions may include alteration, modification, inspection, overhaul, repair, and test/bench check when permitted by ECi's certificate, ratings, limitations, approved data, and applicable RSQCM procedures.

QC-Form-03B Capabilities Audit

RSQCM Certificate No. E16R230X

Procedure:

Prior to performing maintenance, ECi shall verify that the article is identified on the current Capability List and that the requested work is within ECi's repair station certificate, ratings, limitations, and RSQCM-approved procedures.

If an article is not listed, ECi shall not add the article to the Capability List or perform the requested maintenance until a self-evaluation has been completed, documented, reviewed, and approved in accordance with the RSQCM and the Capability List Self-Evaluation procedure.

The self-evaluation shall confirm that ECi has adequate housing, facilities, equipment, materials, technical data, trained and qualified personnel, and quality system controls to perform the specific maintenance function for the article requested.

Only after satisfactory completion and approval of the self-evaluation may the article be added to the Capability List. ECi shall maintain the current Capability List and make it available or submit it to the CHDO as required by the RSQCM.

Each Capability List entry shall identify the article by base part number and, when applicable, the approved dash-number configuration or range of configurations, such as Dash XX (-XX), Dash XXX (-XXX), or Dash XX-XXXX (-XX-XXXX), to ensure the listed capability is clearly controlled and traceable.
